Instructions

^ COLLAPSE ^

Overview Video: <https://youtu.be/3pDB8m62tgM>

1. Create a repository on github, use the format `ucid-course-section` as the repository name.
2. Make sure it's set to private
3. Go to Settings -> Manage Access -> Invite Collaborator -> Search for my ID **MattToegel** and send an invite; if your section has a grader do the same for their github username (refer to course announcements)
 1. **Note:** Once in a while the invite doesn't get created correctly and you'll need to resend it, keep an eye on the acceptance of the invite since this is required for further HW validations. A comment will be left on Canvas for the submission if the invite is missing at the time of grading).
4. From the terminal / command line create a new branch called **M1-GettingStarted**
5. Create a README.md file and add it to the branch
6. Fill in some basic details:
 1. Course/Section
 2. Your name (first is fine)
 3. Brief info about yourself you'd like to share
7. Hint after creating the file
 1. `git add README.md`
 2. `git commit -m "my readme file"`
 3. `git push origin M1-GettingStarted`
 4. Create a pull request from this branch (via github.com)
 5. Don't merge/close the pull request yet
8. Fill in the below deliverables.
9. Once finished, ensure it's saved and click the "Export" button.
10. Move the generated PDF into your local repository folder at any location of your choosing.

11. Do the following commands

1. `git add .` (this will add all changes)
2. `git commit -m "adding output file"`
3. `git push origin M1-GettingStarted`

12. Go back to github and merge the pull request that was opened

13. Go to Canvas and upload the same PDF that you just downloaded and pushed to GitHub

Note: Having the submission saved and active keeps it eligible for grading.

Branch name: M1-GettingStarted

Tasks: 4 Points: 10.00

IDE Setup Evidence (2 pts.)

^COLLAPSE ^

Task #1 - Points: 1

Text: Required Extensions

#1) Show the
PHP Extension
Installed and

Caption (required) ✓
*Describe/highlight
what's being shown*
Showing that I have
installed the correct
PHP Extension

#2) Show
WakaTime
Installed and

Caption (required) ✓
*Describe/highlight
what's being shown*
Highlighting the
Waketime extension
being installed, as well
as the time in the
bottom toolbar.

#3) Show the
MySQL
Extension

Caption (required) ✓
*Describe/highlight
what's being shown*
Highlighting that I have
the correct MYSQL
extension installed and
Enabled.

#4) Show the
MySQL Side
Panel showing

Caption (required) ✓
*Describe/highlight
what's being shown*
Showing that my
database has been
created, highlighting my
UCID

Reflection (6 pts.)

^COLLAPSE ^

Task #1 - Points: 1

^COLLAPSE ^

Task #1 - Points: 1

Text: Talk about what you learned during this module, anything interesting, new, etc.

 Details:

Should be at least a few sentences for full credit

Response:

Some of these things, such as making pull requests, creating new repos, and installing some of the extensions were already familiar to me. But something interesting that I learned about today was WakaTime, and how it can track how long you have been programming for. This is great for setting personal goals, and to quantify how much work you are really doing, which I think is really cool. I think this can be an extension that I might start to use outside of this class for my own personal projects.

^COLLAPSE ^

Task #2 - Points: 1

Text: Did you have any issues? If so, how did you resolve them? If no issues, just type "no issues"

Response:

I had a few issues connecting to my database, because of a couple of typos. Eventually though, I figured it out. I also took a while to fetch the API key for Wakatime, but again I managed to figure it out.

Pull Request (2 pts.)

^COLLAPSE ^

^COLLAPSE ^

Task #1 - Points: 1

Text: Add the pull request link here (it should end in /pull/#)

URL #1

<https://github.com/VikShah/vs53-it202-452/pull/1>
